

JBoss Application Administration I (AD248)

Red Hat

- **Nível:** Intermediário
 - **Duração:** 40h
-

Sobre o curso

Install, configure, and manage Red Hat JBoss Enterprise Application Platform.

Red Hat JBoss Application Administration I teaches you the best practices for installing and configuring Red Hat® JBoss® Enterprise Application Platform (JBoss EAP) 7. Through hands-on labs, learn the essential, real-world tasks that a system administrator needs to know to effectively deploy and manage applications on JBoss EAP.

This course is based on Red Hat JBoss® Enterprise Application Platform 7.4.

Diagnóstico de Competências

- Utilize o [diagnóstico de competências](#) para descobrir quais as oportunidades de formação que mais se adequam a si, ou à sua equipa.

O que recibes com o curso

- Manual oficial Red Hat
 - Acesso a laboratórios oficiais Red Hat
-

Destinatários

- System administrators who are either new to Red Hat JBoss or have experience with Red Hat JBoss Enterprise Application Platform 7.

Objetivos

- Installing and run JBoss EAP 7 in standalone mode and domain mode
- Configuring and managing a JBoss EAP domain
- Deploying applications to JBoss EAP 7 in standalone and domain mode
- Configuring the datasource subsystem
- Configuring Java™ Message Service (JMS)
- Configuring the logging subsystem
- Configuring the web subsystem
- Implementing application security in JBoss EAP 7
- JVM configuration and tuning for JBoss EAP
- Clustering JBoss EAP instances

Pré-requisitos

- [Take our free assessment](#) to gauge whether this offering is the best fit for your skills
- Base experience with system administration on Microsoft Windows, UNIX, or Linux® operating systems
- Basic understanding of TCP/IP networking
- No prior knowledge of Java or shell scripting is required

Programa

- Red Hat JBoss Enterprise Application Platform: Architecture and Features
- Configuring JBoss EAP as a Standalone Server
- Scripting Configuration and Deploying Applications
- Configuring JBoss EAP as a Managed Domain
- Configuring Servers in a Managed Domain
- Configuring Data Sources
- Configuring the Logging Subsystem
- Configuring the Messaging Subsystem
- Securing JBoss EAP
- Configuring the Java Virtual Machine
- Configuring the Web Subsystem
- Deploying Clustered Applications

Red Hat JBoss Enterprise Application Platform: Architecture and Features

- Describe the architecture and features of the Red Hat JBoss Enterprise Application Platform

Configuring JBoss EAP as a Standalone Server

- Configure a standalone server instance of JBoss EAP

Scripting Configuration and Deploying Applications

- Configure JBoss EAP using the Command Line Interface tool and deploy Jakarta EE applications

Configuring JBoss EAP as a Managed Domain

- Configure JBoss EAP as a Managed Domain

Configuring Servers in a Managed Domain

- Configure servers and server groups in a managed domain

Configuring Data Sources

- Configure JDBC database drivers and data sources

Configuring the Logging Subsystem

- Configure log handlers and loggers

Configuring the Messaging Subsystem

- Interpret the messaging architecture and configure various messaging resources

Securing JBoss EAP

- Apply security configurations to enhance the security of applications deployed on JBoss EAP

Configuring the Java Virtual Machine

- Configure the JVM settings in a standalone server and in a managed domain

Configuring the Web Subsystem

- Configure connectors, servers, and other features of the web subsystem

Deploying Clustered Applications

- Configure various subsystems to support the deployment of clustered applications

Note: Course outline is subject to change with technology advances and as the nature of the underlying job evolves.
